

VX Series Multichannel (8) Professional Power Amplifiers

VX108 VX208

With all the features of the VX Series, BGW's first multi-channel amplifiers are 8 channels of unsurpassed sound in compact chassis. These remarkable units set new standards for power per channel in their respective rack units. VX108 and VX208 are 3U. The VX108 delivers a whopping 150W per channel and the VX208 delivers 300W per channel at 4 ohms (all channels driven.) 1dB precision stepped attenuators are on the rear panel where con-

tractors like them. Of course, these models have all the faastLink™ features. These amplifiers are ideal for use in fixed installations where the highest sound quality and reliability are a must. As always, BGW's legendary TCO (Total Cost of Ownership) factor is always an important buying factor and a good reason to use these amps in your next project.

Features

- High fidelity Class AB+B linear output circuit
- High current, specially constructed toroidal transformers provide higher efficiency, extra reserve and no electrical or mechanical noise
- Variable speed fan for more protection and quiet operation
- Turn on surge limiter (no power sequencers needed) should never trip breakers
- Open industry faastLink™ connector
- Transformer input option through faastLink™
- Modular design means less down time if there is a problem
- 1dB precision stepped detented attenuators on the rear for less tampering
- Super quiet turn-on and off & electronic muting
- Durable powder coat finish on a 16 gauge welded steel unibody chassis
- LED indicator for Power, Signal, Clip, and Protect on the front panel
- Barrier strip and monitor speaker output connectors
- Eurostyle barrier strip inputs for universal connections
- XLR balanced inputs
- Removable front handles
- Switchable 30 Hz 12 dB per octave high pass filter
- Ground lift switch
- Bridge Mono/Stereo/Dual Mono switches
- Electronic short circuit protection
- Independent DC and thermal overload protection on each channel automatically protects amplifier and speakers and allows one channel to operate even if the other channel is down.
- Connector protection - no damage if standing on the rear side
- 3 Year warranty
- Made in USA

Watts Per Channel			
Model	8 Ω	4 Ω	2 Ω
VX108	100	150	NR
VX208	200	300	NR
